

Proposal overview

Modern inventory, sales, and reporting for growing retailers and distributors

Prepared for: [Client / Organization Name]

Date: [Insert date]

This document outlines how CheqStock can help your business gain visibility across stock, sales, purchases, and financial performance - with less manual work and fewer errors.

Executive summary

Many businesses still rely on spreadsheets or disconnected tools to track inventory and sales. That approach is error-prone, hard to audit, and does not scale as you add locations, staff, or product lines. CheqStock is designed as a unified platform: one place to record stock movements, sell at the counter or on the go, and understand performance with clear dashboards and reports.

This proposal describes the value proposition, core capabilities, a suggested rollout, and how we can tailor the solution to your workflows.

Challenges we address

- Stock discrepancies and slow stock-taking across warehouses or stores
- Limited visibility into what sells, margins, and cash tied up in inventory
- Fragmented processes between purchasing, receiving, and selling
- Difficulty enforcing roles and permissions as the team grows
- Need for professional receipts/invoices and consistent company branding

What CheqStock offers

CheqStock brings together inventory management, point-of-sale style selling, purchasing, and reporting in a single system accessible on web and mobile.

- Products and categories: rich product records, images, barcodes, and categorization
- Multi-warehouse inventory: stock levels, transfers, adjustments, and stock counts
- Sales and purchases: record transactions, line items, and link them to inventory
- Dashboards and reports: sales summaries, revenue, and operational insight
- User roles and permissions: control who can view or operate sensitive areas
- Company profile: consistent business details for receipts and customer-facing touchpoints
- Subscription-based access: plans that can align with your size and growth

Why businesses choose a dedicated IMS

A purpose-built inventory and sales platform reduces duplicate data entry, improves accuracy of stock on hand, and gives leadership a factual basis for purchasing and pricing decisions. Staff can be trained on clear workflows instead of maintaining fragile spreadsheet formulas.

Suggested implementation approach

- Discovery: map your product catalog, locations, and current processes (1-2 sessions)
- Configuration: warehouses, users, roles, and initial product/category structure
- Pilot: one location or subset of SKUs to validate workflows and reporting
- Training: hands-on sessions for daily operators and administrators
- Go-live and support: cutover plan, hypercare window, and ongoing enhancements

Investment & commercial terms

Pricing depends on subscription tier, number of users/locations, and any custom integrations or data migration. We will provide a formal quote after a short discovery call. Packages are available for basic, standard, and premium. The premium package is available for a monthly payment of GHS 800.00. Basic package is available for a monthly payment of GHS 290.00. Standard package is available for a monthly payment of GHS 170.00.

Next steps

1. Schedule a 30-minute call to confirm fit and priorities.
2. Receive a tailored scope and quote.
3. Agree timeline and kick off onboarding.
