

Subscription tiers & features

Client-friendly breakdown of tier features (Basic, Standard, Premium).

This document summarizes what each subscription tier includes in the platform in module language (Inventory, Sales, Admin, etc.).

It is based on backend feature-gating (see ``ims-services/alt.sql``, ``subscription_tiers`` and ``subscription_tier_features``).

Key rule: Orders / customer ordering is a Premium-only module.

At a glance

Basic

- Core single-store operations: Inventory, Products, Sales, Purchases, Customers, Suppliers
- Payments + subscription viewing
- Best for: a single branch getting started with day-to-day operations

Standard

- Everything in Basic, plus:
- Multi-store access
- Operational workflows (Transfers, Adjustments)
- Admin tools (Users, Roles & Permissions, Locations)
- Inventory insights (Reorder + Expiring)
- Purchase order workflow
- Best for: businesses running multiple branches and needing tighter controls

Premium

- Everything in Standard, plus:
- Orders / customer ordering (Premium-only)
- Exports & data export
- Stock counts
- Notifications
- Audit logs
- Advanced order analytics/automation
- Best for: full platform usage and customer ordering workflows

- Basic: Not included
- Standard: Not included
- Premium: Included

Payments & subscription

- Basic: Payments view/initiate/verify + subscription view
- Standard: Full access
- Premium: Full access

Notes (implementation detail)

- Tiers map to feature codes in ``subscription_tier_features``.
- Most feature codes align with permission codes (e.g., ``inventory.view``, ``sales.create``, ``orders.view``).
- If tier gating is changed in SQL, existing deployments may require re-seeding/updating ``subscription_tier_features`` for changes to take effect.
